fragment, optionally in combination with a plasminogen activator or thrombolytic agent. The method is useful for treating post-thromboembolic-induced ischaemia, for preventing thromboembolic stroke in an animal, and for reducing a required dose of a thromboly agent. Sequences AAU80972-AAU81004 represent antibodies and vector

                                                                                                                                                                                                                                                                                            ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for treating an animal post-thromboembolic induced ischaemia or reducing a required dose of a thrombolytic agent in treatment of an animal post-thromboembolic induced ischaemia, comprising administering an anti-factor IX antibody or its fragment, optionally in combination with a plasminogen activator or thrombolytic agent. The method is useful for treating post-thromboembolic-induced ischaemia, for preventing thromboembolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             animal by
with a plasminogen
This sequence comprises the light chain variable region of mouse anti-human Factor IX monoclonal antibody BC2. Claimed humanised antibodies (see AAW24510-18) contain CDRs (see AAW24540-99) of BC2 cantibodies (see AAW24510-18) contain CDRs (see AAW24540-99) of BC2 heavy and light chain variable regions inserted into framework regions of selected human antibody sequences. They have self-limiting neutralising activity, and are useful as anticoagulant agents in treatment of thrombosis associated with mycardial infarction, unstable angina, atrial fibrillation, stroke, renal famence, pulmonary embolism, deep vein thrombosis, percutaneous transluminal coronary angioplasty, disseminated intravascular coagulation, sepsis, or artificial organs, shunts or prostheses (claimed). Also claimed are chimeric antibodies (see AAW24532), and Fab and F(ab')2 fragments. The claimed antibodies do not cause uncontrolled bleeding (contrast heparin and warfarin) since they provide only partial inhibition of coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; mouse; BC2; animal post-thromboembolic induced ischaemia; thrombolytic agent; anti-factor IX antibody; plasminogen activator; thromboembolic stroke; cerebroprotective; anticoagulant; Thrombolytic; vasotropic; cardiant; anti-respiratory syncytial virus; heavy chain variable region; light chain variable region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This polypeptide sequence comprises a modified light chain variable region (see also AAVA2450) of mouse anti-human factors IX monoclonal antibody BC2. It is encoded by a DNA fragment (see AAV79899) produced by PCR amplification of BC2 cDNA. The modified BC2 VL region is incorporated into novel mouse-human chimeric light chain P9CHLC (see AAVA4532). Claimed anti-Pactor IX chimeric antibodies are useful in the treatment of thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Thrombosis; therapy; Factor IX; anticoaqulant; monoclonal antibody; chimeric antibody; antibody engineering; light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inhibiting thrombosis with self-limiting antibody to coagulation factor - avoids uncontrolled bleeding by providing only partial inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 112;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for treating an animal post-thromboembolic induced ischaemia or reducing a required dose of a thrombolytic agent in treatment of an animal post-thromboembolic induced ischaemia, comprising administering an anti-factor IX antibody or its fragment, optionally in combination with a plasminogen activator or thrombolytic agent. The method is useful for treating post-thromboembolic-induced ischaemia, for preventing thromboembolic stroke in an animal, and for reducing a required dose of a thrombolytic agent. Sequences AAU880972-AAU81004 represent antibodies and vector polypeptides used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                             Treating post-thromboembolic induced ischaemia in an animal by administering anti-factor IX antibody in combination with a plasminogen
                                                                                                                                               thrombolytic agent; anti-factor IX antibody; plasminogen activator; thromboembolic stroke; cerebroprofective; anticoaquiant; Thrombolytic; vasotropic; cardiant; anti-respiratory syncytial virus; heavy chain variable region; light chain variable region;

AMM 19914 and AAW19915 represent the kappa light chain and the heavy chain of the monoclonal antibody (MAb) 5C3. MAb 5C3 is an example of an MAb of the invention, optionally having characteristic the invention. The MAb of the invention, optionally having complementarity determining region (CDP)-like domains of hormones, binds che TrkA receptor under physiological conditions. MAb 5C3, directed against human pl40 TrkA, is a structural and functional mimic of NGF and artificial receptor agonist. It binds in the NGF docking site and promotes TrkA internalisation, TrkA and phosphotidylinositol-3 kinase tyrosine phosphorylation and increases transformation of TrkA-expressing fibroblasts. The Ab or a TrkA docking site, are used to screen for agents that inhibit or mimic nerve growth factor (NGF) biological activity. The agents and Ab inhibit tumour growth in situ for treatment or prevention of neurological diseases, neuromas and neophastic tumours expressing TrkA receptor by preventing binding of NGF to TrkA receptor or down-regulating the receptor. The Ab is also used for mapping correlation. The Ab can also induce NGF-like responses, especially differentiation. The Ab can also induce NGF-like responses, especially are the prognosis and diagnosis of human functions, by cells expressing TrkA. The prognosis and diagnosis of human functions, by cells expressing TrkA. The prognosis and diagnosis of human functions is the prognosis and the prognosis of human functions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

```
The present sequence represents a synthetic CD20-specific chimeric receptor. The specification describes CD-20 specific redirected T cells which express and bear on the cell surface membrane a CD20-chimeric receptor comprising an intracellular signalling domain, a transmembrane domain and an extracellular signalling domain, a transmembrane a CD30-specific receptor. The genetically engineered CD20-specific redirected T cells are useful for treating a CD20+ malignancy, such human patient having previously undergone mycoblative chemotherapy and stem cell rescue. The genetically engineered CD20-specific redirected T cells are also useful for abrogating an untoward B cell function, such as autoimmune disease (lupus or rheumatoid arthritis) in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genetically engineered CD20-specific redirected T cells useful for treating a CD20+ malignancy, such as non-Hodgkin's lymphoma or CD20+ acute or chronic leukemia, and autoimmune disease
                                                                                                                                                   CD20-specific receptor; CD-20 specific redirected {\bf T} cell; leukemia; CD20+ malignancy; non-Hodgkin's lymphoma; myeoablative chemotherapy; stem cell rescue; autoimmune disease; lupus; rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                 /note= "signal peptide from murine T86.66 antibody kappa light chain"

The invention relates to a multifunctional polypeptide comprising a domain with a binding site that specifically recognises an extracellular group of the NKG2D receptor complex and a second domain which functions as a receptor or ligand. The polypeptide and its associated polynciectide are used for the preparation of a pharmaceutical composition for the treatment of cancer, infections and/or autoimmune composition for the treatment of cancer, infections and/or autoimmune composition for the treatment of cancer, infections and/or autoimmune cosophagus, colon, liver, intrahepatic bile ducts, paincras, lung, larynx, breast, ovary, uterus, cervix, prostate, kidney, testis, thyroid, larynx, breast, ovary, uterus, cervix, prostate, kidney, testis, thyroid, larynx, breast, ovary, uterus, caused by viruses, bacteria, fungi, the infectious diseases can be caused by viruses, bacteria, fungi, protozoa or helminths. The autoimmune diseases include multiple selections disease, ankylosing spondylitis, acute anterior cuveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent diabetes mellitus, rheumatoid arthritis, pemphigus vulgaris and autoimmune papatitis, Goodpasture's Sayndrome, myasthenia gravis, insulin-dependent diabetes mellitus, rheumatoid arthritis, pemphigus vulgaris and autoimmune papatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

They may also be used in a pharmaceutical compostion for the therapy of e.g. melanomas, gliomas and carcinomas. The antibodies and fragments are derived from mice but are humanised so as to cause minimum reaction against them. They are produced using the phage antibody library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-epidermal growth factor receptor (EGFR) single chain antibodies and antibodies constructed from anti-EGFR antibody fragments can be used for diagnosis of tumours and assessment of tumour growth in

The present sequence represents a fusion of an anti-CD20 single chain antibody (B9E9) streptavidin. The fusion protein is expressed using vectors of the invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter, and a cloning site for insertion of a second nucleic acid sequence encoding polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second concid, operatively linked to a promoter, encoding a polypeptide to be fused with streptavidin, and a cloning site for insertion of a second conciled encoding at least 129 amin acides of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          e.g. adenocarcinomás or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic purposes, e.g. for detecting the presence or absence of, or treating, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Reno JM;

```
fused with streptavidin, and a cloning site for insertion of a second nucleic acid encoding at least 129 amino acids of streptavidin or its functional variant. The fusion proteins are useful for targeting tumour cells, particularly tumour cells associated with cancer.

e.g. adenocarcinomas or hematological malignancies. The vector construct is useful for expressing of streptavidin fusion proteins. In particular, these are useful as tools for medical diagnostics and therapeutic purposes, e.g. for detecting the presence or absence of, or treating, a target site within a mammalian host.
                                                                                                                                                                                                                                                                                                                                                                 Sequence encoded by the 2H7 VL sequence in which the Vk gene contains \ensuremath{\mathsf{JK5}} sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a fusion of an anti-CD20 single chain antibody (B9E9) streptavidin. The fusion protein is expressed using vectors of the Invention. The specification describes vector constructs for expressing streptavidin fusion proteins. The vector comprises a nucleic acid encoding streptavidin or its functional variant operatively linked to a promoter, and a cloning site for inscribin of a second nucleic acid sequence encoding a polypeptide to be fused with streptavidin, interposed between the promoter and the first nucleic acid sequence. Alternatively, the vector construct comprises a nucleic

Sequence carries the variable region of the chimeric immunoglobulin sequence. The antibodies are useful in passive immunisation avoiding negative immune reactions. They are also useful in assaying and in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunoglobulin G; IgG; light chain; recombinant production; antibody; passive immunisation; serum sickness; anaphylactic shock; immunoassay; imaging; reagent; complement mediated lysis; therapy; variable; region; complementarity determining; CDR; framework.
                                                                                                                                                                                                 Polynucleotide(s) encoding Immunoglobulin molecules - used for efficient prodn. of chimeric human or non-human or class switched antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                        The patentors claim a chimeric antibody molecule comprising 2 light chains and 2 heavy chains, each comprising a constant human region and a variable non-human region. Coding sequences for the Ig chains are also claimed. The invention provides consensus sequences of light and heavy chain J regions useful in the design of oligonucleotides (UIGs) for use as primers or probes for cloning immunoglobulinisht or heavy chain mRNAs or genes. Depending on the hypridizing to all Ig mRNAs or genes containing a single specific J sequence. UIG denotes universal immunoglobulin a single specific J (Updated on 03-OCT-2002 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                       Prodn. of immunoglobulin chains and molecules - is by recombinant DNA procedures, with chimeric antibodies etc. related to cancer specific antigens.

The present sequence is the light chain variable region of the 2H7 antibody. The 2H7 CDNA was used in the preparation of a novel polynucleotide molecule encoding an Ig fragment. The DNA molecule comprises 2 DNA sequences encoding 2 pectate lyase secretion signal sequences respectively linked to a DNA sequence c single prokaryotic promoter so as to form a dicistronic transcription unit, prowided that the Ig fragment can bind an antigen and is produced and secreted by an E. coli host cell when transcription unit, provided that the Ig fragment can bind an antigen and is produced and secreted by an E. coli host cell when the polynucleotide molecule is expressed in the host cell.

The polynucleotide molecule is used for the production of recombinant antibodies, which can be used for passive immunisation without negative immune reactions (e.g. serum sickness and anaphylactic shock), in labelled forms as immunoassay or imaging reagents, in complement mediated lysis and for therapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid encodinding immunoglobulin fragment - comprising discistronic transcription unit with pectate lyase signal sequences

Ig Kappa chain V region (F3, anti-AFP) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Daceis: Mus musculus (house mouse)
C;Accession: PC4405
R;Deng, J.B.; Han, H.; Su, C.Z.; Chen, C.Q.
Chinese Blochem. J. 12, 648-653, 1996
A;Title: Generation of a phage display library of the immunoglobulin repertoire from A;Reference number: PC4405

A;Accession: PC4405
A;Molecule type: mRNA
A;Residues: 1-107 <DEN>
A;Experimental source: spleen cell
C;Superfamily: immunoglobulin V region; immunoglobulin homology
F;16-89/Domain: immunoglobulin homology <IMM>

Length 107; Score 38; DB 2; L Pred. No. 7.6e-31; 35.8%; Score 38; DB illarity 100.0%; Pred. No. 7.6 Conservative 0; Mismatches Best Local Similarity Matches 38; Conserv Query Match
